

Final Announcement

Goal:

Submit production-ready application

Input:

- Accept both PDF or Image formats

Output:

- Cropped images for tables
- One CSV file with the extracted tables contents
- System health tracking (Latency, Success/Failure rates)

Evaluation:

- Health Monitoring: Effectiveness of the tracking dashboard in reporting app status and errors.
- Robustness: How the system handles edge cases (multi-page PDFs, low-resolution images, or files with no tables).
- Usability: Efficiency of the UI and the clarity of the workflow from upload to download.

Additional Features:

- Asynchronous Processing: Handle heavy processing in the background without freezing the UI.
- A preview feature to edit or verify OCR results before the final CSV export.
- Visualizing the model's confidence levels for both detection and structure recognition.
- Containerization: Providing a Dockerfile for easy, consistent deployment across different environments.

Final Announcement

Model Enhancement:

- **Daily Submissions:** Teams are allowed to submit and receive detailed score feedback for their enhanced models only once per day.
- **Leaderboard:** The leaderboard is now frozen, teams will receive their updated scores privately.
